EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kevin T. Godlewski (Reg. No. 47,598) on 1 April 2008.

2. The application has been amended as follows below.

Please amend claim 1 as follows:

Claim 1 (currently amended) A method of fabricating an optoelectronic device, comprising:

depositing a first layer over a first electrode by organic vapor phase deposition, wherein the first layer comprises a first organic small molecule material;

depositing a second layer on the first layer such that the second layer is in physical contact with the first layer, wherein the interface of the second layer on the first layer forms a bulk heterojunction having an interpenetrating network of the first and second layers, the interpenetrating network comprising regions having diameters between 1 to 5 times the exciton diffusion length of the first organic small molecule material, and thereby being configured to enable dissociation of excitons; and

depositing a second electrode over the second layer to form the optoelectronic device.

Please amend claim 17 as follows:

Claim 17 (currently amended) A method of fabricating an optoelectronic device, comprising:

depositing a first layer having protrusions over a first electrode, wherein the first layer comprises a first organic small molecule material; and then

depositing a second layer on the first layer such that the second layer is in physical contact with the first layer, wherein the interface of the second layer on the first layer forms a bulk heterojunction having an interpenetrating network of the first and second layers, the interpenetrating network comprising the protrusions, the protrusions having diameters between 1 to 5 times the exciton diffusion length of the first organic small molecule material, and thereby being configured to enable dissociation of excitons; and

depositing a second electrode over the second layer to form the optoelectronic device.

Please CANCEL claim 20.

Please amend claim 21 to depend from claim 17 as shown:

Claim 21 (currently amended) The method of claim ~~[[20]]~~17, wherein the diameter of the protrusions are between 1.5 to 3 times the exciton diffusion length of the first organic small molecule material.

Please amend claim 33 as follows:

Claim 33 (currently amended) A method of forming a bulk heterojunction comprising:

depositing a first layer over a substrate by organic vapor phase deposition, wherein the first layer comprises a first organic small molecule material; and

depositing a second layer on the first layer such that the second layer is in physical contact with the first layer, wherein the interface of the second layer on the first layer forms a bulk heterojunction having an interpenetrating network of the first and second layers, the interpenetrating network comprising regions having diameters between 1 to 5 times the exciton diffusion length of the first organic small molecule material, and thereby being configured to enable dissociation of excitons.

Please amend claim 34 as follows:

Claim 34 (currently amended) A method of forming a bulk heterojunction comprising:

depositing a first layer having protrusions over a substrate, wherein the first layer comprises a first organic small molecule material; and then

depositing a second layer on the first layer such that the second layer is in physical contact with the first layer, wherein the interface of the second layer on the first layer forms a bulk heterojunction having an interpenetrating network of the first and second layers, the interpenetrating network comprising the protrusions, the protrusions having diameters between 1 to 5 times the exciton diffusion length of the first organic small molecule material, and thereby being configured to enable dissociation of excitons.

3. The following is an examiner's statement of reasons for allowance: A search of the prior art does not disclose or reasonably suggest a method of forming a bulk heterojunction having an interpenetrating network of first and second layers, the interpenetrating network comprising protrusions or regions having diameters between 1 to 5 times the exciton diffusion length of the first organic small molecule material, and thereby being configured to enable dissociation of excitons within the context of the entire claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
